

WORKING TO MITIGATE CLIMATE CHANGE AND REDUCING EMISSIONS

Strategic Partnerships has worked with a variety of universities, companies and international organizations, including the global dairy industry, to aid in the design and then execution of new strategies to substantially reduce emissions. Our strategies have won large-scale support from U.S. government agencies and organizations working around the world, such as the Green Climate Fund, the Gates Foundation, and the US Agency for International Development (USAID).

Strategic Partnerships also helps clients build global and national media visibility for their commitments to sustainability and emissions reduction.

Strategic Partnerships has partnered with the Sustainability team at Arizona State University and ASU LightWorks to create strategies to increase ASU's visibility on carbon emissions reduction, carbon capture, and designing options and policies for carbon credits. SP has also assisted companies and organizations seeking funding from the U.S. government and other sources, helping accelerate success in mitigating climate change and reducing emissions.

Strategic Partnerships has aided clients finding new partners to help accomplish their emissions reduction goals and in securing roles in national and global gatherings and platforms focused on sustainability issues.
